## Handling Precautions

Compare to epoxy encapsulant that is hard and brittle, silicone is softer and flexible. Although its characteristic significantly reduces thermal stress, it is more susceptible to damage by external mechanical force.
As a result, special handling precautions need to be observed during assembly using silicone encapsulated LED products. Failure to comply might lead to damage and premature failure of the LED.

1. Handle the component along the side surfaces by using forceps or appropriate tools.

2. Do not directly touch or handle the silicone lens surface. It may damage the internal circuitry.

3. As silicone encapsulation is permeable to gases, some corrosive substances such as $\mathrm{H}_{2} \mathrm{~S}$ might corrode silver plating of leadframe. Special care should be taken if an LED with silicone encapsulation is to be used near such substances.

Notes:

1. $\theta 1 / 2$ is the angle from optical centerline where the luminous intensity is $1 / 2$ of the optical peak value.
2. Luminous intensity/ luminous Flux: +/-15\%.

* Luminous intensity value is traceable to the CIE127-2007 compliant national standards.

Reflow soldering is recommended and the soldering profile is shown below.
Other soldering methods are not recommended as they might cause damage to the product.

Reflow Soldering Profile For Lead-free SMT Process.

NOTES:

1. We recommend the reflow temperature $245^{\circ} \mathrm{C}\left(+/-5^{\circ} \mathrm{C}\right)$. The maximum soldering temperature should be limited to $260^{\circ} \mathrm{C}$.
2.Don't cause stress to the epoxy resin while it is exposed
to high temperature.
3.Number of reflow process shall be 2 times or less.
